SPC Flooring

— EIR Surface

EIR is called Embossed-in-Register.

EIR manufacturing process that intensifies the depth, texture and realistic look of the flooring by aligning the embossing with the printed design.

Unlike the other textures which are commonly seen on the market—smooth, embossed (a slight texture that does not match the wood grain), and hand scraped, EIR truly create a more realistic, almost real wood! Wood look—make them much more appeal to the end users.

Right now, the EIR surface we can do:

EIR 1#

EIR 2#

EIR 3#

EIR 4#

EIR 5#

How to choose SPC Flooring?

Surface:

BP

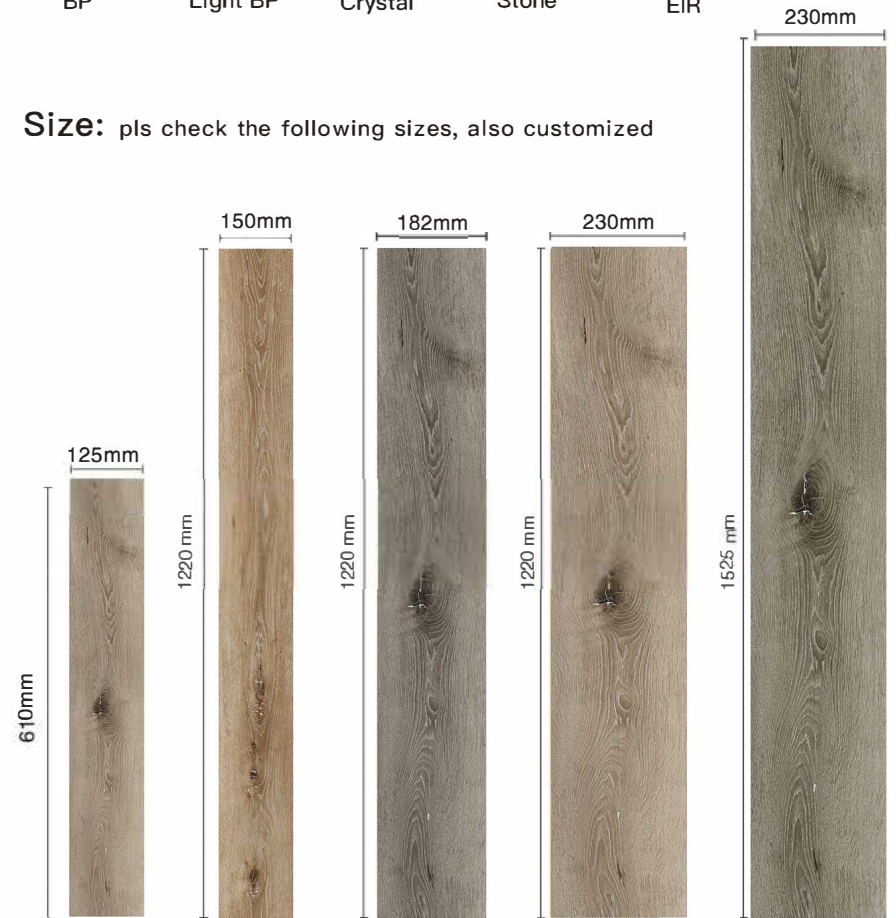

Light BP

Crystal

Stone

EIR

Size: pls check the following sizes, also customized
